Description

The DMF-44 pedestal milling & drilling machine offers a new dimension of milling capabilities compared to the standard conventional mill drills, as this machine allows you to have a longer job to fit onto the table or even mount your work directly to the machine base for maximum height clearance.

This machine has a tapping function switch to allow you to control the required depth when tapping holes. The milling head also has provisions to adjust up and down in addition to the worktable movement up & down as well, given you the optimum options to best suit your requirements.

The spindle on this machine is a 3 morse taper that is driven by a 2hp, 240V motor via gears in the head to ensure maximum drive without any slippage that can occur & generally inherited with belt drive heads.
