Features

- The GM-2-5AX is a 5-axis gantry mill designed for complex, large-part machining, such as airframe components, layup molds, and composite structures. The machine's rigid steel construction provides a very stable cutting platform, and a 1" thick aluminum table is standard. A traveling guard protects the operator from chips and coolant, and keeps the workspace clean.

- Head provides ±245 degrees of C-axis rotation and ±120 degrees of B-axis tilt
- 20,000-rpm HSK 63F spindle
