Teeth per inch (TPI):	40
Pack Quantity (QTY):	12

RECORD POWER

Description

Record Power scroll saw blades are a premium quality range of blades made in Germany. They have been specifically chosen to offer cutting solutions to the vast array of possibilities a scroll saw offers and include both plain and pin end types. Depending on blade thickness, width, tooth patterns and numbers, these blades will cut a large number of materials, including hardwood, softwood, MDF, plywood, plastic, non ferrous metals and horn.

Features

- SSB-PG0840 Pack of 12 Spiral Twist Plain End HSS 40 TPI Scroll Saw Blades
- Featuring a spiral twist, these plain end HSS blades can cut in any direction without the need to turn the workpiece. This is particularly useful for projects that are too big for the throat depth of the scroll saw. They also allow for pieces to be cut with the bevel running in the same direction all round.
- 0.8mm wide, 0.34mm thick, 40 TPI
